## What is LEDAS?

“LEDAS” is the exclusive treatment system applied by our hospital, which consists only of the best advantages of EVLT(Endovenous Laser Therapy), DGS(Duplex Guided Sclerotherapy) and SCT(Sclerotherapy). We aim to treat varicose vein without recurrence in the entire process of ‘diagnosis–treatment management’ through minimally invasive and non-incision surgery, which is the direction of modern medical science. The rate of recurrence of varicose veins in patients undergoing LEDAS treatment is currently 0.

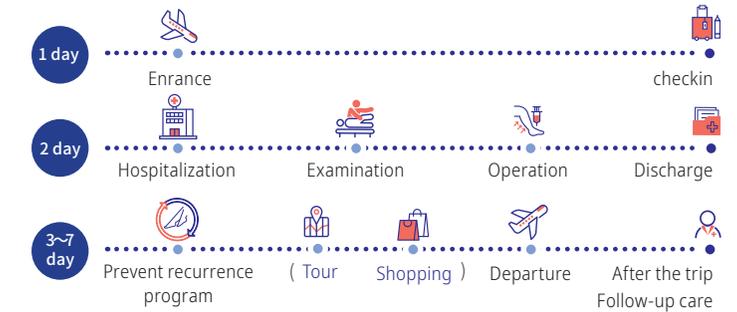

## Feature of the LEDAS treatment

## Service for foreign patients

- If necessary, we can connect you with services such as hotel(near hospital) reservations, tours, and duty-free shopping, etc.
- Efficient time management is possible with hospitalization for only one day.
- Tour and shopping are available on the day of surgery.
- Our English coordinator will help you fully concentrate on your treatment while you are in Korea.

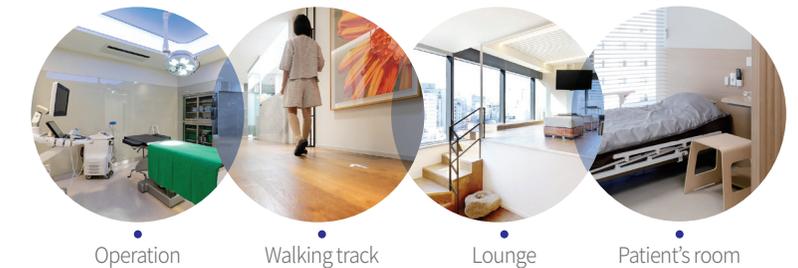

## Medical tour itinerary map

※Treatment duration depends on patient symptoms.

## Hospital facilities For patient's best treatment result and satisfaction

### 11F Operation, Hospitalization center

### 12F Outpatient center
